

COLD LASER PHOTO TO COME

Cold Laser Therapy at Van Every

Drug-free. Non-invasive.

Gentle support for pain and inflammation.

Gentle support, no drugs, no downtime

We use the FDA-cleared Erchonia low-level (cold) laser to deliver focused light to areas dealing with pain and inflammation, supporting your body's own healing response. Most people feel nothing more than gentle warmth. Dr. Saylor often pairs it with chiropractic care, as one part of a bigger plan.

- **Drug-free pain support** for people who would rather not reach for medication first
- **Support around inflammation** and swelling from injury or lingering strain
- **Support for tissue recovery** as your body works to recover
- **Surgery-free and non-invasive**, with no needles and no downtime

What a session is like

You sit or lie down comfortably. We position the laser over the area, and most people feel only a little warmth. Sessions are short, there is no recovery time, and you head right back into your day.

Curious if it is a fit for you?
